

Project Proposal: Web-Based Sales Platform (MVP)

Collaborative Team Approach - Backend Integration Specialist

Company: Devop360 Technology

Client: Henk Veeke

Project Type: Multi-Seller Auction Platform MVP

Total Budget: \$4,500

Payment Structure: Milestone-based via Freelancer.com

Project Overview

Devop360 Technology will serve as the **Backend Integration Team Member** for a collaborative 4-person freelance team building a web-based sales platform. Our role focuses on seamless backend integration with the frontend team and design coordination when required.

Our Responsibilities

Core Backend Tasks

- **Multi-product upload system** per seller with minimum price setting capabilities
- **Monthly bundling logic** per seller with automated organization
- **Advanced auction logic** including:
 - Timed auction functionality
 - Minimum price enforcement
 - Real-time bidding management
- **Comprehensive admin panel** featuring:
 - Auction management interface
 - Seller management system
 - Bundle oversight tools
 - Analytics and reporting

Integration & Collaboration

- **Frontend Integration:** Full interconnection with frontend development team
- **Design Consultation:** Partial interconnection with UI/UX team for feedback and technical suggestions
- **API Development:** RESTful API creation for seamless data flow
- **Database Architecture:** Scalable database design and optimization

- **Performance Optimization:** Backend performance tuning and caching strategies

Technical Stack & Tools

Preferred Technologies:

- **Backend Framework:** Node.js with Express.js or Laravel (PHP)
- **Database:** PostgreSQL or MySQL with Redis for caching
- **Real-time Features:** Socket.IO for live auction updates
- **API Architecture:** RESTful APIs with proper documentation
- **Version Control:** Git with GitHub collaboration
- **Communication:** Discord for team coordination

Timeline & Deliverables

Estimated Duration: 45-60 business days

Availability: July/August 2025 (full commitment)

Milestone Structure & Payment Terms

Milestone 1: Foundation & Architecture (20% Complete)

Payment: \$900 (20% of total budget)

Timeline: 12-15 business days

Deliverables:

- Database schema design and implementation
- Core user authentication system (buyer/seller roles)
- Basic product upload functionality
- Initial API endpoints for frontend integration
- GitHub repository structure coordination

Milestone 2: Core Features Development (80% Complete)

Payment: \$2,700 (60% of total budget)

Timeline: 35-40 business days

Deliverables:

- Complete auction logic implementation
- Monthly bundling system with automated triggers
- Advanced admin panel with full management capabilities
- Payment gateway integration (Stripe/Mollie)

- Real-time bidding functionality
- Complete API documentation
- Integration testing with frontend team

Milestone 3: Deployment & Final Integration (100% Complete)

Payment: \$900 (20% of total budget)

Timeline: 45-60 business days

Deliverables:

- Complete deployment on production server
- Final integration testing with all team components
- Performance optimization and security hardening
- Documentation handover
- Post-deployment support (2 weeks included)

Collaboration Commitment

- ✓ **Team Collaboration:** Full commitment to working with 3 other freelancers under shared direction
- ✓ **GitHub Repository:** Comfortable using client-owned shared repository
- ✓ **Discord Coordination:** Active participation in team communication
- ✓ **Handover Ready:** Structured work approach for seamless handover if needed

Quality Assurance

- Code reviews and testing at each milestone
- Documentation for all implemented features
- Regular progress updates and team synchronization
- Responsive communication for quick issue resolution

Payment Terms

- **Method:** Milestone-based payments via Freelancer.com
- **Release:** Upon client approval of each milestone deliverable
- **Total Project Value:** \$4,500 USD
- **Currency:** USD (United States Dollars)
